

CREATING A PURPOSE

## Environmental Policy

Redesign Ltd regard care for the environment, compliance with legislation and continuous improvement in standards as an integral part of our business strategy. We fully recognise that the nature of our business has the potential to have a significantly adverse effect upon the natural environment unless properly managed.

Our Environmental Management System and Company Policies ensure we are committed to the following:

- Minimising waste in all possible areas of our business
- Through innovative design
- Through optimisation of manufacturing processes to reduce production waste
- Through research to ensure raw material is from sustainable resources
- Through efficient use of energy by prudent management
- Through educating staff to recognise the benefits of implementing our environmental stance
- Participating in recycling and its promotion where possible
- Through salvage and separation of waste to the appropriate channel
- Through promotion of the re-cyclability of products to customers and end users
- Through sourcing recycled raw material where practical
- How does this affect our customer?

By the constant implementation of an ethically sound and robust environmental policy, we believe that our organisation as a company not only improves its own environment but also becomes more efficient. Our workforce can work in a much healthier and agreeable workplace with materials that are carefully selected to help them. They therefore carry out their day-to-day work under less stress, which makes our ultimate goal of providing quality standards with good efficiencies at a cost effective price more easily achievable.
